

## GCF in Word Problems

When a group of items is being grouped,  
you are finding factors.

When you are combining different items  
into groups & you don't want leftovers  
(remainders), you are finding common  
factors.

Ex: Fruit cups w/ grapes, apples & melon.  
What is the greatest # of cups we can make  
w/ 36 grapes, 24 apples, 42 melons

GCF: 6 fruit cups
